ADAPTIVE CONTROL

Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Approach to adaptive neural net-based H control design p331
Backstepping-based adaptive PID control p54
Generalised predictive control of evoked potentials for general anaesthesia p481
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Input-output based pole-placement controller for a class of time-delay systems p323
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
On-line adaptive tuning for PID controllers p60
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Stable adaptive fuzzy control of the molten steel level in the strip casting process p357
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157

AEROSPACE SYSTEMS

Robust two-degree-of-freedom H control of a seeker scan loop system p149

BIOMEDICAL ENGINEERING

Generalised predictive control of evoked potentials for general anaesthesia p481

CLOSED LOOP SYSTEMS

Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Analysis of steady-state performance for cross-directional control p433
Closed-loop identification with MPC for an industrial scale CD-control problem p448
Delay-dependent stabilisation and disturbance tolerance for time-delay systems subject to actuator saturation p387
Dual parameterisation for linear nonminimum phase plants p494
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
LMI approach to digital redesign of linear time-invariant systems p297
MIMO nonlinear PID predictive controller p203
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131
Robust control of cars with front and rear wheel steering p394
Robust two-degree-of-freedom H control of a seeker scan loop system p149
Sequential design method for MIMO systems with parametric uncertainties p511
Sliding-mode control scheme for a class of continuous chemical reactors p263
Spatial frequency antiwindup strategy for cross-directional control problems p414
Structural interpretation of matched pole-zero discretisation p257
Swing-up control problem for a self-erecting double inverted pendulum p169
Towards autonomous PI control satisfying classical robustness specifications p26

COMPUTATIONAL COMPLEXITY

Input-output based pole-placement controller for a class of time-delay systems p323

CONTROL APPLICATIONS

Analysis of steady-state performance for cross-directional control p433
Closed-loop identification with MPC for an industrial scale CD-control problem p448
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Design of PID controllers based on constrained optimisation p32
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
Identifying temporal and spatial responses of cross machine actuators for sheet-forming processes p441
LMI approach to digital redesign of linear time-invariant systems p297
Model-based evaluation of the effect of horizontal roll offset on cross-directional control performance in cold-strip rolling p463
Modelling and energy based nonlinear control of crane lifters p209
Optimal dynamic-inversion-based control of an overhead crane p405
Quantifying the potential benefits of constrained control for a large-scale system p423
Sliding-mode control scheme for a class of continuous chemical reactors p263
Spatial frequency antiwindup strategy for cross-directional control problems p414
Stable adaptive fuzzy control of the molten steel level in the strip casting process p357
Two-dimensional and EM techniques for cross directional estimation and control p457

CONTROL EQUIPMENT

Backstepping-based adaptive PID control p54
Derivative filter is an integral part of PID design p41
Multirate predictor control scheme for visual servo control p117
Optimal control design for hard disk drive servosystems p237
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131

CONTROL SYSTEM ANALYSIS

Active fault-tolerant control system against partial actuator failures p95
Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Algorithm on robust sliding mode control for discrete-time system using fast output sampling feedback p497
Analysis of steady-state performance for cross-directional control p433
Approach to adaptive neural net-based H control design p331
Average performance control by static output feedback p188
Closed-loop identification with MPC for an industrial scale CD-control problem p448
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Computing a robust D-stability bound using a parameter-dependent Lyapunov approach p505
Computing the frequency response of systems affinely depending on uncertain parameters p311
Control of integral processes with dead-time. 1. Disturbance observer-based 2 DOF control scheme p285
Control of integral processes with dead-time. 2. Quantitative analysis p291
Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
Design of decoupled PI controllers for two-by-two systems p74
Design of PID controllers based on constrained optimisation p32
Dual parameterisation for linear nonminimum phase plants p494
Evaluation of generalised quadratic cost functionals for linear systems with many commensurate time delays p547
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
Identifying temporal and spatial responses of cross machine actuators for sheet-forming processes p441
Input-output based pole-placement controller for a class of time-delay systems p323
LMI approach to digital redesign of linear time-invariant systems p297
Minimum energy control subject to output constraints: numerical approach p105
Model-based evaluation of the effect of horizontal roll offset on cross-directional control performance in cold-strip rolling p463
Modelling and energy based nonlinear control of crane lifters p209
Multiloop PI/PID controller design based on Gershgorin bands p68
Multirate predictor control scheme for visual servo control p117
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
Normalised quadratic controls for a class of bilinear systems p520
Optimal control design for hard disk drive servosystems p237
Optimal dynamic-inversion-based control of an overhead crane p405
PID controllers: recent tuning methods and design to specification p46
Quantifying the potential benefits of constrained control for a large-scale system p423
Quantitative robust stability analysis and PID controller design p3
Receding horizon H control for nonlinear discrete-time systems p540
Regional flux target with minimum energy p349
Robust and optimal tuning of PI and PID controllers p17
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131
Robust control of cars with front and rear wheel steering p394
Robust two-degree-of-freedom H control of a seeker scan loop system p149
Self-generating rule-mapping fuzzy controller design using a genetic algorithm p143
Sequential design method for MIMO systems with parametric uncertainties p511
Sliding-mode control scheme for a class of continuous chemical reactors p263
Spatial frequency antiwindup strategy for cross-directional control problems p414
Structural interpretation of matched pole-zero discretisation p257
Towards autonomous PI control satisfying classical robustness specifications p26
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157
Two-degree-of-freedom design method of state-predictive LQI servo systems p365
Two-dimensional and EM techniques for cross directional estimation and control p457

CONTROL SYSTEM STABILITY

Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Algorithm on robust sliding mode control for discrete-time system using fast output sampling feedback p497
Analysis of steady-state performance for cross-directional control p433
Average performance control by static output feedback p188
Backstepping-based adaptive PID control p54
Computing a robust D-stability bound using a parameter-dependent Lyapunov approach p505
Computing the frequency response of systems affinely depending on uncertain parameters p311
Control of integral processes with dead-time. 1. Disturbance observer-based 2 DOF control scheme p285
Control of integral processes with dead-time. 2. Quantitative analysis p291
Delay-dependent stabilisation and disturbance tolerance for time-delay systems subject to actuator saturation p387
Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
Design of PID controllers based on constrained optimisation p32
Dual parameterisation for linear nonminimum phase plants p494
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
Generalised minimum variance control of linear time-varying systems p111
Global stabilisation for bilinear systems with time delay p89
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Maximisation of feasibility/stability regions of model predictive control for constrained linear systems p243
MIMO nonlinear PID predictive controller p203
Modelling and energy based nonlinear control of crane lifters p209
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
Normalised quadratic controls for a class of bilinear systems p520
Numerical robust stability analysis of fuzzy feedback linearisation regulator based on linear matrix inequality approach p82
On-line adaptive tuning for PID controllers p60

Optimal control design for hard disk drive servosystems p237
Quantitative robust stability analysis and PID controller design p3
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Robust and optimal tuning of PI and PID controllers p17
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131
Robust control of cars with front and rear wheel steering p394
Robust global asymptotic continuous stabilisers for imperfectly known systems with stable drift subsystems p163
Robust two-degree-of-freedom H control of a seeker scan loop system p149
Sequential design method for MIMO systems with parametric uncertainties p511
Sliding-mode control scheme for a class of continuous chemical reactors p263
Spatial frequency antiwindup strategy for cross-directional control problems p414
Stable adaptive fuzzy control of the molten steel level in the strip casting process p357
Towards autonomous PI control satisfying classical robustness specifications p26
Two-degree-of-freedom design method of state-predictive LQI servo systems p365

CONTROL SYSTEM SYNTHESIS

Active fault-tolerant control system against partial actuator failures p95
Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Algorithm on robust sliding mode control for discrete-time system using fast output sampling feedback p497
Approach to adaptive neural net-based H control design p331
Average performance control by static output feedback p188
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Control of integral processes with dead-time. 1. Disturbance observer-based 2 DOF control scheme p285
Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
Design of decoupled PI controllers for two-by-two systems p74
Design of PID controllers based on constrained optimisation p32
Dual parameterisation for linear nonminimum phase plants p494
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Input-output based pole-placement controller for a class of time-delay systems p323
LMI approach to digital redesign of linear time-invariant systems p297
Multiloop PI/PID controller design based on Gershgorin bands p68
Normalised quadratic controls for a class of bilinear systems p520
Optimal control design for hard disk drive servosystems p237
Optimal dynamic-inversion-based control of an overhead crane p405
PID controllers: recent tuning methods and design to specification p46
Quantitative robust stability analysis and PID controller design p3
Robust and optimal tuning of PI and PID controllers p17
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131
Robust control of cars with front and rear wheel steering p394
Robust two-degree-of-freedom H control of a seeker scan loop system p149
Self-generating rule-mapping fuzzy controller design using a genetic algorithm p143
Sequential design method for MIMO systems with parametric uncertainties p511
Sliding-mode control scheme for a class of continuous chemical reactors p263
Spatial frequency antiwindup strategy for cross-directional control problems p414
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157
Two-degree-of-freedom design method of state-predictive LQI servo systems p365

DIGITAL TECHNIQUES

Optimal control design for hard disk drive servosystems p237

DISCRETE SYSTEMS

Algorithm on robust sliding mode control for discrete-time system using fast output sampling feedback p497
Analysis of steady-state performance for cross-directional control p433
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
Generalised minimum variance control of linear time-varying systems p111
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
LMI approach to digital redesign of linear time-invariant systems p297
Optimum structures of digital controllers in sampled-data systems: a roundoff noise analysis p247
Receding horizon H control for nonlinear discrete-time systems p540
Structural interpretation of matched pole-zero discretisation p257

DISTRIBUTED PARAMETER SYSTEMS

Delay-dependent stabilisation and disturbance tolerance for time-delay systems subject to actuator saturation p387
Evaluation of generalised quadratic cost functionals for linear systems with many commensurate time delays p547
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Input-output based pole-placement controller for a class of time-delay systems p323
Minimum energy control subject to output constraints: numerical approach p105
Multirate predictor control scheme for visual servo control p117
Regional flux target with minimum energy p349

ENGINEERING COMPUTING

Closed-loop identification with MPC for an industrial scale CD-control problem p448
Modelling and energy based nonlinear control of crane lifters p209
Multirate predictor control scheme for visual servo control p117
Optimum structures of digital controllers in sampled-data systems: a roundoff noise analysis p247
Towards autonomous PI control satisfying classical robustness specifications p26

ENVIRONMENTAL ASPECTS

LFT/SDP approach to the uncertainty analysis for state estimation of water distribution systems p137

ERRORS AND ERROR ANALYSIS

Optimum structures of digital controllers in sampled-data systems: a roundoff noise analysis p247

FEEDBACK

Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Average performance control by static output feedback p188
Computing a robust D-stability bound using a parameter-dependent Lyapunov approach p505
Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Multirate predictor control scheme for visual servo control p117
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
Optimal control design for hard disk drive servosystems p237
Robust two-degree-of-freedom H control of a seeker scan loop system p149
Swing-up control problem for a self-erecting double inverted pendulum p169

FILTERS AND FILTERING

Filtering method for nonlinear systems with constraints p525

FUZZY CONTROL

Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
Numerical robust stability analysis of fuzzy feedback linearisation regulator based on linear matrix inequality approach p82
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Self-generating rule-mapping fuzzy controller design using a genetic algorithm p143
Stable adaptive fuzzy control of the molten steel level in the strip casting process p357

MATHEMATICAL TECHNIQUES

Analysis of steady-state performance for cross-directional control p433
Approach to adaptive neural net-based H control design p331
Average performance control by static output feedback p188
Computing the frequency response of systems affinely depending on uncertain parameters p311
Delay-dependent stabilisation and disturbance tolerance for time-delay systems subject to actuator saturation p387
Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
Evaluation of generalised quadratic cost functionals for linear systems with many commensurate time delays p547
Filtering method for nonlinear systems with constraints p525
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
LMI approach to digital redesign of linear time-invariant systems p297
Nonlinearities in NARX polynomial models: representation and estimation p343
Optimal dynamic-inversion-based control of an overhead crane p405
Quantifying the potential benefits of constrained control for a large-scale system p423
Sequential design method for MIMO systems with parametric uncertainties p511
Spatial frequency antiwindup strategy for cross-directional control problems p414

MILITARY SYSTEMS

Robust two-degree-of-freedom H control of a seeker scan loop system p149

MULTIVARIABLE CONTROL SYSTEMS

Algorithm on robust sliding mode control for discrete-time system using fast output sampling feedback p497
Design of decoupled PI controllers for two-by-two systems p74
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
Global stabilisation for bilinear systems with time delay p89
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
MIMO nonlinear PID predictive controller p203
Multiloop PI/PID controller design based on Gershgorin bands p68
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
Quantifying the potential benefits of constrained control for a large-scale system p423
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131
Sequential design method for MIMO systems with parametric uncertainties p511
Sliding-mode control scheme for a class of continuous chemical reactors p263
Spatial frequency antiwindup strategy for cross-directional control problems p414
Variable structure control of a photovoltaic energy converter p303

NEURAL NETWORKS

Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Approach to adaptive neural net-based H control design p331

NONELECTRIC VARIABLES CONTROL

Closed-loop identification with MPC for an industrial scale CD-control problem p448
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
Identifying temporal and spatial responses of cross machine actuators for sheet-forming processes p441
LMI approach to digital redesign of linear time-invariant systems p297
Model-based evaluation of the effect of horizontal roll offset on cross-directional control performance in cold-strip rolling p463
Optimal dynamic-inversion-based control of an overhead crane p405
Robust control of cars with front and rear wheel steering p394
Stable adaptive fuzzy control of the molten steel level in the strip casting process p357
Swing-up control problem for a self-erecting double inverted pendulum p169
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157

NONLINEAR CONTROL SYSTEMS

Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Approach to adaptive neural net-based H control design p331
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Global stabilisation for bilinear systems with time delay p89
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
MIMO nonlinear PID predictive controller p203
Modelling and energy based nonlinear control of crane lifters p209
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
Normalised quadratic controls for a class of bilinear systems p520
Numerical robust stability analysis of fuzzy feedback linearisation regulator based on linear matrix inequality approach p82
Optimal dynamic-inversion-based control of an overhead crane p405
Receding horizon H control for nonlinear discrete-time systems p540
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Robust control of a class of non-linear cascade systems: a novel sliding mode approach p131
Robust global asymptotic continuous stabilisers for imperfectly known systems with stable drift subsystems p163
Self-generating rule-mapping fuzzy controller design using a genetic algorithm p143
Sliding-mode control scheme for a class of continuous chemical reactors p263

NUMERICAL ANALYSIS

Computing a robust D-stability bound using a parameter-dependent Lyapunov approach p505
Filtering method for nonlinear systems with constraints p525
Identification of a deterministic constant-affine state space model with known initial conditions p217
Regional flux target with minimum energy p349

OPTICAL IMAGE PROCESSING

Multirate predictor control scheme for visual servo control p117

OPTIMAL CONTROL

Analysis of steady-state performance for cross-directional control p433
Approach to adaptive neural net-based H control design p331
Average performance control by static output feedback p188
Closed-loop identification with MPC for an industrial scale CD-control problem p448
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Design of PID controllers based on constrained optimisation p32
Evaluation of generalised quadratic cost functionals for linear systems with many commensurate time delays p547
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177
Generalised predictive control of evoked potentials for general anaesthesia p481
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
Identifying temporal and spatial responses of cross machine actuators for sheet-forming processes p441
Maximisation of feasibility/stability regions of model predictive control for constrained linear systems p243
MIMO nonlinear PID predictive controller p203
Minimum energy control subject to output constraints: numerical approach p105
Multirate predictor control scheme for visual servo control p117
Normalised quadratic controls for a class of bilinear systems p520
Optimal control design for hard disk drive servosystems p237
Optimal dynamic-inversion-based control of an overhead crane p405
Optimum structures of digital controllers in sampled-data systems: a roundoff noise analysis p247
Quantifying the potential benefits of constrained control for a large-scale system p423
Receding horizon H control for nonlinear discrete-time systems p540
Regional flux target with minimum energy p349
Restricted structure controller tuning and performance assessment p8
Robust and optimal tuning of PI and PID controllers p17
Robust two-degree-of-freedom H control of a seeker scan loop system p149
Swing-up control problem for a self-erecting double inverted pendulum p169
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157
Two-degree-of-freedom design method of state-predictive LQI servo systems p365
Two-dimensional and EM techniques for cross directional estimation and control p457

OPTIMISATION

Design of PID controllers based on constrained optimisation p32
LFT/SDP approach to the uncertainty analysis for state estimation of water distribution systems p137
Maximisation of feasibility/stability regions of model predictive control for constrained linear systems p243
Self-generating rule-mapping fuzzy controller design using a genetic algorithm p143

PARAMETER ESTIMATION

Active fault-tolerant control system against partial actuator failures p95
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Dual parameterisation for linear nonminimum phase plants p494
Identifying temporal and spatial responses of cross machine actuators for sheet-forming processes p441

PATTERN RECOGNITION

Multirate predictor control scheme for visual servo control p117

POWER CONVERTERS

Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Variable structure control of a photovoltaic energy converter p303

POWER SYSTEM CONTROL

Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
Variable structure control of a photovoltaic energy converter p303

POWER SYSTEMS AND PLANTS

Variable structure control of a photovoltaic energy converter p303

PREDICTIVE CONTROL

Analysis of steady-state performance for cross-directional control p433
Closed-loop identification with MPC for an industrial scale CD-control problem p448
Co-ordinated control of profile and shape in hot strip finishing mills with nonlinear dynamics p471
Design of decoupled PI controllers for two-by-two systems p74
Generalised predictive control of evoked potentials for general anaesthesia p481
Maximisation of feasibility/stability regions of model predictive control for constrained linear systems p243
MIMO nonlinear PID predictive controller p203
Multirate predictor control scheme for visual servo control p117
Quantifying the potential benefits of constrained control for a large-scale system p423
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157
Two-degree-of-freedom design method of state-predictive LQI servo systems p365
Two-dimensional and EM techniques for cross directional estimation and control p457

RADAR THEORY

Filtering method for nonlinear systems with constraints p525

ROBOTICS

Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Fuzzy controller for flexible-link robot arm by reduced-order techniques p177

SELF-ADJUSTING SYSTEMS

Adaptive tracking controller design for robotic systems using Gaussian wavelet networks p316
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Approach to adaptive neural net-based H control design p331
Backstepping-based adaptive PID control p54
Generalised predictive control of evoked potentials for general anaesthesia p481
Hamiltonian modelling and nonlinear disturbance attenuation control of TCSC for improving power system stability p278
Input-output based pole-placement controller for a class of time-delay systems p323
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
On-line adaptive tuning for PID controllers p60
Robust adaptive sliding mode control using fuzzy modelling for a class of uncertain MIMO nonlinear systems p193
Self-generating rule-mapping fuzzy controller design using a genetic algorithm p143
Stable adaptive fuzzy control of the molten steel level in the strip casting process p357
Trajectory-adaptive digital tracking controllers for non-minimum phase systems without factorisation of zeros p157

SIGNAL PROCESSING

Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Filtering method for nonlinear systems with constraints p525
Input-output based pole-placement controller for a class of time-delay systems p323
Two-dimensional and EM techniques for cross directional estimation and control p457

SIMULATION, MODELLING AND IDENTIFICATION

Active fault-tolerant control system against partial actuator failures p95
Adaptive tracking with complete compensation of unknown disturbances for nonlinear output feedback systems p533
Closed-loop identification with MPC for an industrial scale CD-control problem p448
Computing the frequency response of systems affinely depending on uncertain parameters p311
Control of integral processes with dead-time. 1. Disturbance observer-based 2 DOF control scheme p285
Control of integral processes with dead-time. 2. Quantitative analysis p291
Dual parameterisation for linear nonminimum phase plants p494
Filtering method for nonlinear systems with constraints p525
Identification of a deterministic constant-affine state space model with known initial conditions p217
Identification of discrete-time MIMO systems using a class of observable canonical-form p125
Identifying temporal and spatial responses of cross machine actuators for sheet-forming processes p441
LFT/SDP approach to the uncertainty analysis for state estimation of water distribution systems p137
MIMO nonlinear PID predictive controller p203
Multiloop PI/PID controller design based on Gershgorin bands p68
Nonlinear adaptive control via sliding-mode state and perturbation observer p269
Nonlinearities in NARX polynomial models: representation and estimation p343
Optimal control design for hard disk drive servosystems p237
Towards autonomous PI control satisfying classical robustness specifications p26
Two-dimensional and EM techniques for cross directional estimation and control p457

STATISTICAL ANALYSIS

Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
Nonlinearities in NARX polynomial models: representation and estimation p343
Receding horizon H control for nonlinear discrete-time systems p540

SYSTEMS THEORY

Identification of discrete-time MIMO systems using a class of observable canonical-form p125

TIME-VARYING SYSTEMS

Delay-dependent stability and output feedback stabilisation of Markov jump system with time-delay p379
Generalised minimum variance control of linear time-varying systems p111
H output feedback control for delay systems with nonlinear and parametric uncertainties p226
LFT/SDP approach to the uncertainty analysis for state estimation of water distribution systems p137

TRANSPORTATION

Robust control of cars with front and rear wheel steering p394
